

# Services Under Result-Oriented Model

## 1. KPI: App Install & Doctor Registration

This stage focuses on **doctor onboarding and activation**, which is the foundation of tele-consultation success.

### Step 1.1 – Doctor Identification & Outreach

Client can choose **one of the following approaches**:

#### Process 1.1.1 – Field-Led Doctor Sourcing (Agency-Driven)

- Agency deploys trained field executives to clinics and hospitals
- Doctors are identified across:
  - Urban areas
  - Semi-urban towns
  - Rural villages
- Data collected:
  - Doctor name
  - Clinic / hospital name
- Agency shares a **master doctor list** (e.g., 10,000 doctors from a district / region)
- PyraMed applies qualification filters (specialty, location, relevance) and shortlists doctors
- Agency reconnects with shortlisted doctors for onboarding
- **Commercials applicable for doctor identification and verification**

#### Process 1.1.2 – Database-Led Activation (Client-Driven)

- PyraMed shares its existing doctor database
- Agency contacts doctors from the provided list
- Objective:
  - App install on doctor's mobile device
  - Successful registration using verified mobile number
- Faster activation cycle due to pre-existing data

### Step 1.2 – Tele-Consultation Enablement

- Agency assists doctors in:
  - Understanding tele-consultation workflow
  - Platform usage and basic training
- Agency ensures:
  - At least **one successful tele-consultation** per onboarded doctor
- Completion of tele-consultation is considered a **core KPI**

## 2. First 5 Tele-Consultations per Doctor

This stage focuses on **creating initial traction and habit formation**.

- Agency actively supports doctors to complete their **first 5 tele-consultations**
- Rationale:
  - 5 consultations are sufficient for doctors to understand platform value
  - Increases long-term retention and confidence
- Post first 5 consultations, growth is driven via:
  - Sales packages / subscription upgrades **OR**
  - Patient awareness & demand generation campaigns
- Goal:
  - Move doctors towards **self-sustained consultation flow**

## Approach B: Effort-Oriented Model

### Objective:

Provide **ground-level execution and verified data**, without committing to conversion outcomes.

### Primary Measurable Outcome:

Accurate and auditable **data collection only**.

## Services Under Effort-Oriented Model

### Stage 1 – Daily Doctor Visit Program

- Agency field executives visit doctors on a daily basis
- Each field executive is assigned a defined geography
- Every visit is logged in an internal tracking portal

### Mandatory visit inputs:

- Doctor name
- Clinic name
- Visit proof (selfie / timestamp / location)

### Stage 2 – Doctor Interest & Status Tagging

- During visits, doctors are tagged as:
  - Interested
  - Not Interested
  - Follow-up Required
- No pressure for app install or registration
- Objective is **ground intelligence collection**, not conversion

### Stage 3 – District-Level Doctor Data Creation

- Creation of comprehensive doctor database including:
  - Doctor name
  - Clinic name
  - Location (village / town / district)
  - Basic qualification (if available)
- Rural doctors are also included to ensure full coverage
- Charges applicable based on:
  - Number of doctors covered
  - District / geography size

## **Stage 4 – Reporting & Transparency**

- Daily / weekly activity reports shared with client
- Reports include:
  - Number of visits
  - Doctors contacted
  - Interest status breakdown
- Focus on **effort visibility and auditability**
